

Internet Modem CBN8000 Set up Guide

Setting up your High Speed Internet Service

Before you begin:

> Review contents of your install kit

- An ethernet cable to connect your device
- CBN Modem
- Power supply

Part 1: Connecting the modem

- 1** Connect one end of the coax cable to the 'Cable' port on your modem, then connect the other end of the cable to a nearby coax wall outlet.

- 2** Attach the power cord to the 'Power' port on your modem and plug into a nearby electrical wall outlet.

- 3** Turn the modem on, and wait until all lights are on (the GLOBE light may flicker).
This can take about 5 minutes.

Part 2: Connecting your device

Option A: Direct Connection

If you are only connecting to one device, you can connect directly to the modem.

Connect one end of the ethernet cable to the yellow LAN Port 1 on your modem, and the other end to an ethernet LAN port on the device you want to connect.

Option B: Wireless Router

Connecting with a router allows you to connect:

- more than one device
- wireless devices
- devices without an ethernet port

Connect one end of the ethernet cable to the yellow LAN port "1" on your modem and the other end to the Internet or WAN port on your router.

For help setting up wireless devices refer to the instruction manual for your router

It is important (for both options) to connect to LAN Port 1
Do not use LAN Port 2
